COMMENTS TO AUTHORS

This is good and comprehensive review related to thrombin activation and liver inflammation in advanced HCV infection. The manuscript is well organized and well constructed. However, the authors should revise few typos and adjust the format to WJG format, especially the format of citation.

COMMENTS TO AUTHORS

In this manuscript, González-Reimers et al reviewed the thrombin activation and its effects in HCV patients. This is an interesting topic and the manuscript was well organized. I would suggest its acceptance after minor revising. 1. I would suggest the author to draw a figure to illustrate the effect of HCV on coagulation and anticoagulation. Such a figure would help the author to better understand the statement in the text. 2. Another figure is required to illustrate the effects of thrombin on fibrogenesis. 3. Language revising: ① The last sentence on page 12: "Poujol-Robert et al., in 2004 [53] , report an increased odds ratio for cirrhosis". Change "report" to "reported". ②The last paragraph: "but it was also associated with a decreased probability of decompensation of liver disease[93]." "was" should be deleted.
