Central neck compartment dissection in papillary thyroid carcinoma: An update

César P Ramírez-Plaza

Abstract

Papillary thyroid carcinoma (PTC) is the most common thyroid malignancy, accounting for approximately 90% of thyroid malignancies in areas of the world without deficit of Iodine. It's universally accepted that total thyroidectomy is the minimal surgical treatment for patients with PTC higher than 1 cm. When a quality surgery is performed, the prognosis for PTC is excellent with 10 and 20-
