### JOURNAL EDITOR-IN-CHIEF (ASSOCIATE EDITOR) COMMENTS TO AUTHORS

The central nodal compartment disease of Papillary Thyroid Carcinoma is still a matter of discussion. The guideline from the National Comprehensive Cancer Network recommends CND only in the presence of clinically nodal disease. However, substantial controversy still exists regarding the ideal surgical treatment in this clinical scenario. In this paper, the authors exhaustively discuss the indications, advantages and disadvantages of the available therapeutic option related to the central neck compartment in thyroid cancer.
