SPECIFIC COMMENTS TO AUTHORS

1. More details should be given in the introduction to the causes and diagnosis of chest wall tuberculosis. 2. In the introduction, more detailed information about Xpert MTB/RIF assay should be presented, its usage area and diagnostic power should be explained with literature data. 3. In Figure 1, the lesion should be better defined on gray scale USG images. 4. Study limitations should be detailed in the discussion. 5. The study was mainly carried out on the tuberculosis diagnosis method, tru-cut biopsy efficiency is a secondary result. For this reason, this part should be omitted from the conclusion. 6. A suitable core type should be added to the text.
