SPECIFIC COMMENTS TO AUTHORS

The authors reported an interesting and enjoyable case of a patient that had gastric cancer not expressing any mismatch repair protein. These cases are very rare and their occurrence in the stomach is even rarer. The manuscript is well-written and well-structured. The title is clear and reflects the manuscript. The abstract is brief and concise. The introduction gives a good background about the disease. The case is well-presented and the used figures are informative. The discussion is thorough and informative. I have only one comment: The language needs to be revised. I suggest having it corrected by someone fluent in English.
