

[Impact of COVID-19 on liver function: results from an ...](#)<https://pubmed.ncbi.nlm.nih.gov/32651938>

None of the seven patients with known chronic liver disease had liver decompensation. Only one patient developed acute liver failure. In patients with altered liver function tests, $\text{PaO}_2/\text{FiO}_2 < 200$ was associated with greater mortality and need for intensive care (HR 2.34, 95% CI 1.07-5.11, $p = 0.033$). To conclude, a high prevalence of altered liver function tests was noticed in Italian patients with COVID-19, ...

[COVID-19 impact on the liver](#)

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8180204>

Jun 06, 2021 - Liver damage in COVID-19 has been attributed to the direct attack by SARS-CoV-2, drug toxicity in COVID-19 therapy, acute inflammatory damage and hypoxia caused by pneumonia. Direct attack by SARS-CoV-2 on the liver includes the direct cytopathic effect on hepatocytes and cholangiocytes, and the effects of coagulopathy and endothelial aggression in small intrahepatic vessels.

[COVID-19 and the liver](#)

<https://pubmed.ncbi.nlm.nih.gov/32553666>

In the current pandemic, hepatic dysfunction has been seen in 14-53% of patients with COVID-19, particularly in those with severe disease. Cases of acute liver injury have been reported and are associated with higher mortality.
