SPECIFIC COMMENTS TO AUTHORS

It is not very clear how the group was sub-divided in mild and moderate ASD levels.

SPECIFIC COMMENTS TO AUTHORS

This study aimed to evaluate the effect of menstrual hygiene skills training given to adolescents with autism spectrum disorder (ASD) on their menstrual hygiene skills. From the results, we can see the training has shown a good effect. However, there are some questions and suggestions about this manuscript. 1. The symptoms faced by adolescents with ASD are various from person to person. Considering this large variety, the small sample size in this study is not enough to make a convincing conclusion. The results are of uncertainty. There might be a large sampling error in this study. This should be discussed in the Limitations section. Fortunately, authors gave a detailed sample size estimation. 2. How many adolescents with ASD are there in Türkiye? What is the prevalence of ASD among adolescents in Türkiye? 3. The adolescents are from three special education centers. Authors should tell us the scale and any valuable information about these center. For example, how many adolescents with ASD are there in these centers every year? 4. The results are mainly from the questionnaire surveillance, which are subjective. Are there any other objective methods that can be used for evaluating the effect of training? 5. The normality of data before and after training

should be examined before using Wilcoxon test. 6. Please show us the sample size of reference 7 in your manuscript. 7. There are some typos in this manuscript. For example, after traning should be after training in Table 4. Please check them throughout the manuscript.
