Case Control Study

Analyzing predictors of graft survival in patients undergoing liver
transplantation with donors aged 70 years and over

Caso-Maestro O *et al.* LT with aged donors

Abstract

AIM

To increase the number of available grafts.

METHODS

This is a single-center comparative analysis performed between April 1986
and May 2016. Two hundred and twelve liver transplantation (LT) were
performed with donors ≥ 70 years old (study group). Then, we selected the
first cases that were performed with donors < 70 years old immediately after
