COMMENTS TO AUTHORS

In the abstract, the precise names of the TNF-inhibitors should be mentioned. It has to be clarified in the methodology that the patients were or were not diabetic. The study design is shallow and the disease activity should have been taken in to consideration. Discussion: Our data are unable to firmly demonstrate an effect on blood glucose for this medication or other TNFis in a cohort of rheumatoid arthritis patients... COMMENT: Which mendcation is referred to by the word 'this'? Only 15 references is few for an original article. References should be added up to 40 references to enrich the introduction and discussion.

COMMENTS TO AUTHORS

The manuscript is well-written. Can authors explain why 90% of patients are male whereas in rheumatoid arthritis ratio of female:male is 2-3 to 1?
