Proton therapy for hepatocellular carcinoma: Current knowledge and future perspectives

Gyu Sang Yoo, Jeong Il Yu, Hee Chul Park

Abstract

Hepatocellular carcinoma (HCC) is the second leading cause of cancer-related death, as few patients can be treated with currently available curative local modalities. In patients with HCC where curative modalities are not feasible, radiation therapy (RT) has emerged as an alternative or combination therapy. With the development of various technologies, RT has been increasingly used for the management of HCC.

These approaches bear the potential to individualize anticancer therapy, in the end allowing treatment of those benefiting most and excluding those who do not. This article shortly reviews the current knowledge in the management of HCC and provides insights into future perspectives with a special focus on recent progress ...
