Answer to Reviewers

Recalcitrant distal humeral non-union following previous Leiomyosarcoma excision treated with retainment of a radiated non-angiogenic segment augmented with 20 cm free fibula composite graft.

A case report

M. Gathen, G. Norris, S. Kay, PV Giannoudis

We want to thank all reviewers for their remarks on our case report. Of course further information about the functional outcome is important for all readers and we included it into the manuscript. Like it was asked we did cuts on the abstract, the discussion and the case report. We also did corrections on the References.
