INTRODUCTION

SYSTEMIC CHEMOTHERAPY ...

CYTOREDUCTIVE SUR

One unique feature of malignant tumor cells is their ability to spread to other organs via distribution through blood, lymph or peritoneal fluid. Once the primary tumor has spread, survival rates decrease rapidly. Colorectal cancer is the third most common tumor worldwide; in 2035, 2.4 million patients will have developed a colorectal malignancy [1]. In colorectal cancer, the peritoneum is the second most-frequent site for metastases after the liver [2–4]. Maybe due to its poor prognosis,...

Colorectal Peritoneal Metastases: A Systematic Review of ...

<https://www.hindawi.com/journals/grp/2019/5180895> ▾

Colorectal peritoneal metastases (CPM) are associated with abbreviated survival and significantly impaired quality of life. In patients with CPM, radical multimodality treatment consisting of cytoreductive surgery (CRS) combined with hyperthermic intraperitoneal chemotherapy (HIPEC) has demonstrated oncological superiority over systemic chemotherapy alone.
