COMMENTS TO AUTHORS

The reviewed paper is a good review article written on a current, actual topic. However, there are many shortcomings in a submitted version of the manuscript. I recommend the authors to read ?Guidelines for Manuscript Preparation and Submission: Review? more carefully. Due to these shortcomings (see Review), the submitted manuscript should be seriously corrected and cannot be published in WJG in its presented form.

COMMENTS TO AUTHORS

This review article is about regrouping ampullary cancer based on the molecular type (molecular marker expression) instead of traditional histopathological type (based of the origin, i.e. ampullary vs. pancreas vs. bile duct vs. duodenum). Authors reviewed good amount of current literatures and suggested to regroup ampullary cancer intestinal type is more similar to duodenal cancer and has more similar sensitivity to small intestinal cancer chemotherapeutic regimens. It is a well written review and worth publishing. However there are a few points that need to be clarified. Major 1. Authors should clarify the difference between duodenal cancer and small intestinal cancer. Duodenal cancer is part of small intestinal cancer, but it is confusing to use both duodenal cancer and small intestinal cancer interchangeably. For example, in section Adjuvant studies in periampullary cancers, authors referred a few studies regarding of adjuvant chemotherapy on small intestinal adenocarcinoma without clarifying the location of the cancer. Readers may wonder where small intestinal cancer came from as opposed to

ampullary cancer. Also, in section Systemic chemotherapy in advanced and metastatic ampullary and duodenal cancers, authors referred a study about small intestinal cancer [66] without the details of the tumor location. It would be beneficial if authors can provide more details. Minor Citation number needs to be revised completely throughout the review. Some of citation number was listed in erroneous fashion and the font is also different in some occasions (i.e. 14, 28, 40, 54 etc.)
