Response to Reviewer's Comments

- Reviewer 1 Comment:

73 - explain variation for 12.8-41.1%:

Thank you for your comment. These figures came from two different studies which used different methods and different prostheses, accounting for the difference in reported complication rates. To avoid any confusion, we addressed this issue by changing the sentence to "up to 41.1%"

76 - aseptic loosening- but why?

We appreciate this valuable question. This was a factor listed as contributing to patellofemoral complications in the cited resources. However, these resources did not give an explanation as to why this was a cause of complications.

- Reviewer 2 Comment:

Thank you for bringing this error to our attention. There must have been a technical error with our end-note software that inserted the incorrect references. We have since changed the references back to the correct articles and changed the reference numbers accordingly.
