

Dear Editor:

The paper was revised according to the reviewer's suggestions. I hope that you and the reviewers will be satisfied with our revisions.

Regards,

Li Huang

Reviewer #1:

Specific Comments to Authors: Dear authors, greeting First, the new of this study is the management of TMD patient during orthodontic treatment. This manuscript confirmed the relationship between orthodontic treatment and temporomandibular disorders. Second, this manuscript used hybrid treatment to manage TMD patient during orthodontic treatment. The conclusions appropriately summarize the data that this study provided. Third, the limitation of the study is the patient should be screened for TMD using CBCT and MRI before orthodontic treatment. Finally, this case report study encounter the above-listed criteria checklist. Best regards.

Response: Thank you for carefully reading this article, through which we attempt to prove that there is no clear causal relationship between TMD and orthodontic treatment. Besides, we used varied method to improve TMD and reconstruct the occlusal relationships. In the future treatment, the lesson we learned was that the patient should be screened for TMD using CBCT and MRI before orthodontic treatment.
