COMMENTS TO AUTHORS

First of all the title should be changed properly. Secondly, material and methods section should be separated into patients/laboratory techniques/imaging techniques/statistics. Thirdly, the paper is too long. It should be shortened and many sentences should be omitted. More recent references should be added to manuscript. Moreover, some minor language errors should be corrected.

COMMENTS TO AUTHORS

I do not have substantial criticisms to the present publication. Despite minor flaws, I have read the manuscript with interest. Despite the observational nature of the work is research on large groups of patients which is a strong page manuscript. According to my opinion lacks a summary of the chapter discussion, which would improve the evaluated publication.
