

## **Consent**

A signed consent was obtained and saved for this case report by the patient through the standard institutional consent document and saved by the institution.

Most importantly, there are no patient identifiers on the case or the images.

In American institutions, medical records from a patient is not allowed to print out and give to anyone else. This is according to the law of HIPPA. Again, there are no patient identifier on the entire case so this patient is completely anonymous.

We have discussed this with Xiang Li, Assistant Editor, Editorial Office.
