

Manuscript 20028

Response to Reviewers

Reviewer:

This is a well done review regarding DAA surgical techniques. The only recommendation to improve the attractiveness of the manuscript is to add a few photos for this surgical technique: positioning patient on a fracture table verses a regular table; landmarks for surgical incision, specific retractors, etc.

These new figures have been provided.

All comments and edits have been addressed in-text.

Thank you for your consideration

Atul F. Kamath, MD
