### SPECIFIC COMMENTS TO AUTHORS

In abstract, it is needed to clarify "severe serous cavity bleeding" of which part of body?

There are many serous cavities in the human body. In this case, I assumed within the pleural cavity? From the full manuscript. "hemorrhagic effusion" needs to be clarified. "hemorrhagic pleural effusion"? Fluid cultures were obtained? Results? Did the patient receive heparin/anti-coagulation during dialysis treatment? Any genetic testing results? Any family history? This is a case report, not a research study. How can Spearman's correlation be accurate in only 1 case analysis? Some revision of the English language is needed. There are some parts of the paper where it is quite difficult to make sense of some sentences English edit will help to improve the quality of the manuscript. To mention as a few as below: "Acquired factor V deficiency(AFVD)" should be "Acquired factor V deficiency (AFVD)" "active partial thrombintime" should be "active partial thrombin time" "medical histor" is misspelled. "The patient had a free previous medical history" is not professional in academic writing. "free" should be avoided. "andplatelet (PLT) count" should be "and platelet (PLT) count" "pseudo aneurysm" should be "pseudoaneurysm" "regarding to the association between coagulation factor V deficiency" should be "regarding the association between coagulation factor V deficiency"
