**Pathological and therapeutic interactions between bacteriophages, microbes and the host in inflammatory bowel disease**

Janka Babickova, Roman Gardlik

### Abstract

The intestinal microbiome is a dynamic system of interactions between the host and its microbes. Under physiological conditions, a fine balance and mutually beneficial relationship is present. Disruption of this balance is a hallmark of inflammatory bowel disease (IBD). Whether an altered microbiome is the consequence or the cause of IBD is currently not fully understood. The pathogenesis of IBD is believed to be a complex
