COMMENTS TO AUTHORS

I think this is a very interesting review that requires a change in the title, because the most important issue has not been included in it. In fact, the inclusion of bacteriophages and IBD makes this review different from the majority of reviews dealing with this issue. For this reason I propose to change the title to include the importance that phage can have in the context of intestinal microbiota and homeostasis, and the impact on IBD and cancer susceptibility. As minor comments: there must be a mistake in the number of strains and bacterial species, since this is much higher than that referred in the text, and I would recommend to change the term microflora by microbiota throughout the text
