JOURNAL EDITOR-IN-CHIEF (ASSOCIATE EDITOR) COMMENTS TO AUTHORS

This review paper is a comprehensive, well-written, clear manuscript. It reviewed current literatures related to surgical outcomes of pulmonary resection for lung cancer after neo-adjuvant treatment, and found that patients who receive neo-adjuvant therapy for lung cancer have worse early surgical outcomes. It can greatly improve the understanding of the role of neo-adjuvant treatment in pulmonary resection, and it should be carefully considered how to select appropriate and suitable patients for induction of relevant treatments. The manuscript deserves to be published in the World Journal of Surgical Procedures.
