Locoregional treatment for hepatocellular carcinoma: the best is yet to come

Naveen Kalra, Pankaj Gupta, Yogesh Chawla, Niranjana Khandelwal

Abstract

23

Hepatocellular carcinoma (HCC) is the sixth-most common type of cancer worldwide. The only definitive treatment modalities capable of achieving a cure are hepatic resection and hepatic transplantation. However, most patients are not candidates for these therapies. Overall, treatment options are driven by the stage of HCC. Early-stage disease is treated with ablative therapies, with radiofrequency ablation (RFA) the ablative therapy of choice. Microwave ablation and irreversible
