COMMENTS TO AUTHORS

The article addresses an interesting topic, but it seems like it can be cut down in length to eliminate a lot of background information and concentrate more on the gender differences with respect to psoriasis. Also, the authors do not definitively say much about what they feel are the main gender issues at hand, which makes the article less useful.

COMMENTS TO AUTHORS

This is an interesting and informative review article exploring gender differences in psoriasis epidemiology, pathogenesis, clinical features, and therapeutic management. I think the article can be improved by including a table summarizing the gender differences in psoriasis. Also, please consult a language editor for grammatical improvement.

COMMENTS TO AUTHORS

The mini-review by Colombo D et al aims at summarizing the available evidence in the literature regarding gender differences in various aspects of psoriasis, including epidemiology, genetics, risk factors, associated conditions, quality of life, clinical and therapeutic aspects. The mini-review is well written, very informative and comprehensive. All aspects are well-developed. It may be accepted as is.

COMMENTS TO AUTHORS

Authors performed a minireview about current concepts of psoriasis end gender. These are my comments: Pathogenesis and risk factors: Authors should be more prudence when they mention that: ".....PSORS1 which is the strongest candidate gene for psoriasis identified to date." Psoriasis is a multifactorial disease with no Mendelian inheritance. And in the same sense, when they mention about the "penetrance of psoriasis.....was affected or (sic) a presumed gene carrier. Article would be enriched if authors add some information (briefly) about subtype of psoriasis, malignancies and infections, masked hypertension , sexual behavioral, methylenetetrahydrofolate reductase polymorphism, fatty distribution and their relation with gender.
