**Manuscript type:** TOPIC HIGHLIGHTS

**Candidates for liver transplantation with alcoholic liver disease: psychosocial aspects**

Diogo Telles Correia, Inês Mega

### Abstract

In Europe, 30 to 50% of liver transplantations are currently due to alcoholic liver disease (ALD). In the USA, this percentage is 17.2%. Post-transplant survival and other predictors of clinical course do not differ significantly from those in other types of transplanted patients, as long as there is no relapse of drinking.

### Match Overview

There are no matching sources for this report.
