Nutrition and metabolism in hepatocellular carcinoma ...

<https://hbsn.amegroups.com/article/view/1229/1850> ▾

In patients with established HCC undergoing treatment, optimal nutritional management has potential benefits on morbidity and mortality. The treatment of choice for HCC, when feasible, is complete tumor resection. This often requires removal of a significant portion of cirrhotic, functionally compromised liver.

Systemic therapies for hepatocellular carcinoma

<https://pubmed.ncbi.nlm.nih.gov/26632544>

Hepatocellular carcinoma (HCC) is a common cancer with high incidence and mortality worldwide. The main treatments for HCC include radical hepatectomy, liver transplant, locoregional therapies, and systemic therapies. Systemic treatments include targeted agent treatment, chemotherapies, antiviral therapies, and nutritional treatments.

https://pubmed.ncbi.nlm.nih.gov/32097925

Background/aim: Few studies have examined the details of nutritional status in patients with unresectable hepatocellular carcinoma (u-HCC) undergoing systemic chemotherapy with lenvatinib. We evaluated the prognostic/predictive value of nutritional status using Onodera's prognostic nutritional index (O-PNI) for overall survival among patients with u-HCC treated with lenvatinib.

Hepatocellular carcinoma - Overview - Mayo Clinic

https://www.mayoclinic.org/diseases-conditions/...

Risk FactorsDiagnosisTreatment

The risk of hepatocellular carcinoma, the most common type of liver cancer, is higher in people with long-term liver diseases. It's also higher if the liver is scarred by infection with hepatitis B or hepatitis C. Hepatocellular carcinoma is more common in people who drink large amounts of alcohol and who have an accumulation of fat in the liver.

Hepatocellular Carcinoma

Medical Condition

Liver

Tumor

The most common cause of liver cancer is cirrhosis, which occurs in people with advanced liver disease.

RareMayOftenTreatedCan I...

It is caused by the liver's abnormal growth of cells, which can lead to the formation of a tumor.

Symptoms

The early stages of the disease do not present any symptoms but in the later stages the symptoms which are noted are as follows:

Upper abdominal painWeight lossJaundiceFluid in the abdomenLiver failure

Treatments

Treatment options include hepatectomy, target drug delivery and the use of radiation to kill the cancerous cells.

Medication

Chemotherapy: Therapy where the drugs are used to kill the cancer cells.

5-FluorouracilCapecitabineIrinotecanOxaliplatin

Target drug delivery: Drugs which are target oriented help in slowing down the progression of the disease.

Sorafenib

Medical procedures: HepatectomyLiver transplantationAblation

Therapies: Radiation therapy

Nutritional therapy for hepatocellular carcinoma

Ruiz-Margáin A *et al.* Nutrition in hepatocellular carcinoma

Astrid Ruiz-Margáin, Berenice M Román-Calleja, Paulina Moreno-Guillén, José A González-Regueiro, Deyanira Kúsulas-Delint, Alejandro Campos-Murguía, Nayelli C Flores-García, Ricardo Ulises Macías Rodríguez

Abstract

Hepatocellular carcinoma (HCC) is the most frequent primary liver cancer and presents together with cirrhosis in most cases. In addition to commonly recognized risk factors for HCC development, such as hepatitis B virus/hepatitis C virus infection, age and alcohol/tobacco consumption, there are nutritional risk factors also related to HCC
