**Perinatally infected adolescents living with human immunodeficiency virus  
(Perinatally human immunodeficiency virus)**

Maria Leticia Santos Cruz, Claudete A Cardoso

**Abstract**

<sup>29</sup>  
<sup>1</sup> The availability of highly potent antiretroviral treatment during the last decades has transformed human immunodeficiency virus (HIV) infection in a chronic disease. Children that were diagnosed during the first months or years of life and received treatment, are living longer and better and are presently reaching adolescence and adulthood. Perinatally HIV-infected adolescents (PHIV) and young adults may present specific clinical, behavior and social characteristics

## Match Overview
