

1. How many number of patient in each group , sequential chemotherapy group and concurrent chemotherapy radiotherapy group developed \geq grade III acute toxicity ?

Unfortunately, toxicity data was not collected robustly, but the treatment was well tolerated. We were not able to give exact grade III toxicity thought.

2.What was the major factor affecting the overall survival ?

The data showed a good performance status in limited-stage Esophageal cancer which was treated with concurrent chemoradation gave better overall survival.
