#### **SPECIFIC COMMENTS TO AUTHORS**

I read the case report with a great interest. It is very interesting case report. I have some questions. According to case report, MRI and CT scan was done for case. Please discuss why MRI and CT angiography was done. Ultrasonography and liver biopsy are enough for diagnosis. Please describe about role of the imaging procedures in discussion. Also please check line 157-158 "The compound glycyrrhizin tablet was discontinued at the 15th month when the patient was discharged from the hospital. " I think 15 months after hospital discharge is more better. Please check the Figure 3 that mentioned" and the compound glycyrrhizin tablet was discontinued at the 15th months postdischarge"
