COMMENTS TO AUTHORS

This is a good overview of current surgical options and opinions regarding Crohn's disease. The author discusses nicely on the latest techniques available for surgeons to potentially slow down the recurrence of Crohn's disease. The most important question we face today is the use of biologics postoperatively. The author does comment on this subject but would be nice if he can expand on this. It would be great for him to add a few more references and may want to talk about his personal views and practices regarding this.
