Basic Study

Biliary tract external drainage protects against intestinal barrier injury in hemorrhagic shock rats

Lu Wang, Bing Zhao, Ying Chen, Li Ma, Er-Zhen Chen, En-Qiang Mao

Abstract

AIM: To investigate the effects of biliary tract external drainage (BTED) on intestinal barrier injury in hemorrhagic shock (HS).

METHODS: BTED was performed via cannula insertion into the bile duct. HS was induced by drawing blood from the femoral artery at a rate of 1 mL/min
