Sequential tumor-directed and lobar radioembolization before major hepatectomy for hepatocellular carcinoma

Vouche M *et al.* Two-steps ⁹⁰Y radioembolization for HCC

Michael Vouche, Thierry Degrez, Fikri Bouazza, Philippe Delatte, Maria Gomez Galdon, Alain Hendlisz, Patrick Flamen, Vincent Donckier

Abstract

Preoperative radioembolization may improve the resectability of liver tumor by inducing tumor shrinkage, atrophy of the embolized liver and compensatory hypertrophy of non-embolized liver. We describe the case of a cirrhotic Child-Pugh A patient with a segment IV hepatocellular carcinoma requiring a left hepatectomy.
