COMMENTS TO AUTHORS

The manuscript identify predictors of early recurrence after curative surgery and characterize patterns of recurrence and survival after gastric cancer recurrence. The study is very designed, and interesting. Totally 417 clinicopathological data of consecutive patients following curative resection for gastric were analyzed. Based on the results, the authors concluded that For patients with pT2-4a stage, age, pT stage, pN stage, Lauren histotype, lymphovascular invasion, intraoperative chemotherapy, and postoperative chemotherapy were independent factors influencing early recurrence. Some minor revisions needed: 1 Minor language polishing should be corrected. 2 The text need some editing before the publication. 3 More references should be discussed.
