### COMMENTS TO AUTHORS

In this cross-sectional study, the authors provide well documented outcomes of transition from paediatric to adult care in a large group of patients with inflammatory bowel disease. Limited data exist regarding disease outcomes for Inflammatory Bowel Disease subsequent to transition from paediatric to adult care and the patients' perspectives on the process. The Authors found that transition programs did not appear to adversely affect disease or psychosocial outcomes; however, patients had poor knowledge of their transition plan and many were not strongly prepared. This study will give us beneficial information about outcomes of transition from paediatric to adult care in patients with inflammatory bowel disease. However, the title could be made more informative as "Outcomes and patients' perspectives of transition from paediatric to adult care in Inflammatory Bowel Disease". This study is acceptable for publication.

### COMMENTS TO AUTHORS

This is a retrospective study, a survey, on an important aspects in IBD, transition care. The article describes the disease and some other aspects, but misses on the details the important aspects, financial aspects, reproductive health, substance use and abuse and effect of disease and development. Other than the mood aspects, were there any aspects related sexual health, including pregnancy? The authors should also add what new aspect does this article add
