SPECIFIC COMMENTS TO AUTHORS

It is well-written however there is not novel findings. Biliary complications may lead to graft failure and need early interventional or surgical re-anastomosis treatment. Re-transplant is the only way to solve severe biliary complication in patients who could not be treated by interventional or surgical re-anastomosis treatment.

SPECIFIC COMMENTS TO AUTHORS

1. The study should draw a flow chart.
2. The baseline table should compare the differences in baseline variables between the bile duct stenosis group and non-stenosis, presented as a random forest plot.
3. correlation coefficient and 95% CI between dependent and independent variables should be reflected in The regression model.
4. Model predictive power needs to be measured in terms of statistical indicators

SPECIFIC COMMENTS TO AUTHORS

This is a retrospective study regarding the long-term outcomes after liver transplantation. This is relatively well-written and showed the clinical outcomes. Therefore, i think it will be of interest to the readership of this journal.
