Effect of endogenous cholecystokinin on the course of acute pancreatitis in rats

Dang-Mei Jia, Mitsuyoshi Yamamoto, Makoto Otsuki

Abstract

AIM: To examine the effects of pancreatic rest, stimulation and rest/stimulation on the natural course of recovery after acute pancreatitis.

METHODS: Acute hemorrhagic pancreatitis (AP) was induced in male rats by intraductal infusion of 40, 1/100g body weight of 3% sodium taurochenate. All rats
