This is an interesting case report regarding a rare case of peritoneal malignancy arising in a patient with BRCA1 mutation who was previously treated with prophylactic salpingo-oophorectomy. The literature is vague and further research is really needed for the treatment and follow up of these patients. Thus the question is original and well defined. The manuscript is written appropriately and correctly designed. Results and discussion are well presented. Language is simple and understandable, but there would be of some merit to undergo some linguistic improvement. The manuscript could be acceptable for publication after minor revision.
