undergoing major abdominal surgical operations with special adherence to adequately elucidated guidelines and widely accepted protocols. This manuscript is very interesting. However, I feel there are some problems in this article. (1) In THERAPEUTIC APPROACH, author should add a table to make them easy to understand the contents of action of drugs classifies as NOAC. (2) The contents of DIAGNOSTIC MODALITIES are very interesting. Author should add a table to make them easy to understand. (3) I think cisplatin and irinotecan are not antiangiogenic agents. In THERAPEUTIC APPROACH, "GI cancers are frequently treated with antiangiogenic agents, such as cisplatin and irinotecan, which are associated with increased risk for VTE as well as combined neoadjuvant chemotherapy." should be changed to correct sentence. (4) This manuscript needs some language corrections.
