Strategies to improve outcome of patients with hepatocellular carcinoma receiving a liver transplantation

Marta Guerrero-Misas, Manuel Rodríguez-Perálvarez, Manuel De la Mata

Abstract

Liver transplantation is the only therapeutic option which allows to treat both, the hepatocellular carcinoma and the underlying liver disease. Indeed, liver transplantation is considered the standard of care for a subset of patients with cirrhosis and hepatocellular carcinoma. However, tumour recurrence rates are 15%-20% with a very poor prognosis. Strategies to minimize tumour recurrence and thus to improve outcome are focused in a careful selection of
