COMMENTS TO AUTHORS

1) Recent studies showed that nucleos(t)ide analogues (NA) therapy given to HCC patients after resection significantly improved survival. But many questions of using NA therapy are on debate. 2) The comments from the authors is better guidance to how to select NA drugs for preventing the recurrence of HCC. The question from the authors need to be further study in clinical work. I suggest that the comments can be published in he form of Letter to editors in World J Hepatology.

COMMENTS TO AUTHORS

This is a critical comment on a paper published by Lee et al. (reference 4 of the manuscript) about the efficacy of the association of nucleos(t)ide analogues in patient with hepatocellular carcinoma after radiofrequency ablation. In this comment it is highlighted the relevance of the work performed by Lee et al., as well as some weaknesses of the work and future recommendations. Just some minor editing work should be considered before its acceptance for its publication.
