

## **RESPONSE TO REVIEWERS**

### **REVIEWER # 1**

Reviewer describes our article as an excellent review and does not need any revision.

### **REVIEWER # 2**

Reviewer has no specific comments and does not need any revision and describes it as a good review article.

### **REVIEWER # 3**

Reviewer describes our article as very instructive. But needs some revisions. We clarified paramagnetic and diamagnetic substances and gave information between their behaviors in the Principles and Technical Aspects part and highlighted the related new paragraph.

Our figures have some distortion problems as you mentined. This originates from our very busy clinical practice and we are unable to give sufficient time to get better quality images. Besides, it seems very difficult to get the patients back for new imaging and some of them has undergone treatment which would cause lack of the findings. We tried to do our best and arranged them as 300 dpi resolution.
