SPECIFIC COMMENTS TO AUTHORS

In this retrospective study, the authors discussed the effectiveness of coronary injection

with nitroprusside, a commonly used vasodilator, as a pharmacological intervention

strategy administered before balloon inflation for the prevention of no reflow or slow

flow during percutaneous coronary intervention. The results showed preventive use of

sodium nitroprusside proved beneficial. The methods are clearly described, and the

results are very interesting. The reviewer suggests to accept it after a minor revision. 1.

Some minor language polishing should be corrected. 2. The title is too long, please short

it. 3. A conclusion should be added. 4. The references should be edited according to the

journal's guideline.

Answer: Thank you very much for your comment.

1. Some minor language polishing should be corrected.

The language was proofed carefully.

2. The title is too long, please short it.

The title was shorted.
