		<input type="checkbox"/> No records	<input type="checkbox"/> Major revision

## COMMENTS TO AUTHORS

This paper shows that in one patient suffering from both Crohn's disease (CD) and Familial mediterranean fever (FMF) treatment with leukopheresis brought the patient into remission. This is a promising observation, and it will be exciting to see if the remission remains and if the treatment works in new patients with the same diagnosis. The patient in the study had a number of health problems and was treated with several types of medications. The authors should discuss to what extent these factors are common for patients with CD and FMF. The last sentence in the Abstract should be corrected
