#### **SPECIFIC COMMENTS TO AUTHORS**

This article is original and highly qualified to add to the evidence of gastric remnant tumors. The hypothesis of the carcinogenesis process proved to be compatible between patients and the theory of tumor occurrence. The author performed a preoperative gastroendoscopy examination, is there any bile reflux on anastomotic gastrojejunostomy? If you found reflux, this will strengthen the hypothesis of GRC. Intra operative findings and discussion of why GRC is in accordance with existing theories. The discussion presented by the author was quite good. It is better to also discuss cases that have occurred before, whether there is GRC in accordance with the reported patient. Patient follow-up was only 6 months, please also add the reported survival rates that have been reported in various studies as a comparison of the patients reported by the author so that doctors can better know the next treatment.
