SPECIFIC COMMENTS TO AUTHORS

Manuscript No.: 70970 Title: Using a fretsaw in treating chronic penial incarceration with metallic hoop: a case report and literature review In this study, the author has studied "Using a fretsaw in treating chronic penial incarceration with metallic hoop: a case report and literature review." The topic is interesting, but the English language used in the manuscript needs major improvements as there are some punctuation and grammatical mistakes present throughout the manuscript. The figures required the proper explanation and caption. Moreover, research models are not discussed in an understandable manner; the introduction section is poor followed by literature, which reflects that the author needs a more comprehensive way of thinking. The discussion part is not up to the mark, and no significant comparison is made. Most of the references are from low impact journals. It is obvious that the quality of the manuscript does not fulfil the standards of the journal; therefore, it should be reconsidered after major revision. Specific comments: 1. The authors are advised to revise the title to make clear whether it is a case report or review. 2. The authors are advised to revise the abstract especially the conclusion section. 3. Please add more strong keywords up to six. 4. Page 3, line 72-78: "Penial incarceration is a rare situation, usually with foreign objects strangulated." Please add a reference here. 5. Page 3, The whole introduction section is general. Authors are advised to revise the introduction section carefully and add more data to make an association between each sentence to support the problem statement. It is recommended to add literature in the introduction section to create a research gap. 6. Page 3: What is the novelty of the present study? 7. Page 4, line 106-107: "This steel hoop was 40mm in the external diameter, with a 10 mm width and a 2mm thickness." There is always a space between a value and a unit (40 mm). 8. The authors are advised to

move the literature from the discussion to the introduction section for better understanding. 9. The discussion section is not up to the mark; the authors only discussed general literature without any comparison of results. The discussion should be in form of paragraphs instead of sections. No limitations are enlisted, and no overall conclusion is added. Overall, the discussion section needs extensive revision. 10. Authors are advised to proofread the whole manuscript to overcome grammatical mistakes. 11. The figures need proper interpretation and appropriate captions, and proper labelling. 12. The figure legends always should be below the figure. 13. Please revise the references according to the journal instructions.

SPECIFIC COMMENTS TO AUTHORS

Dear authors Thank you for your manuscript submission to our journal. Your operative technique itself is similar to using a thread to remove a ring from the finger. This condition, however, is rarely encountered. Your report, therefore, is very informative to the readers. Minor mistakes I noticed are as follows; P7 line 5; Various tools were mention in line 25; Campbell's reported P8 line 13; Urgent situation vesus. Chronic Situation
