COMMENTS TO AUTHORS

Dear Authors, This is a case report that is describing a novel rectus sheath block technique for laparoscopic colostomy in an adult. However, I would like to point out the following Generally, the manuscript is good written, however it has some grammar errors. So, the manuscript should be edited by medical manuscript edition service. What does "naval" mean? Figure 1 is not necessary. The Abstract should be edited as a Case Report. Video 1 is not clear for injection. It should be removed. The manuscript should be published after minor revision.

COMMENTS TO AUTHORS

The authors introduced a novel method about laparoscopic rectus sheath block for colostomy, and proved it was performed a better postoperative analgesic effect. 1. Why the authors did not administer the local anesthesia through percutaneous approach under ultrasound guidance? The authors said that RS block has been demonstrated simpler and safer, and how do you verify? 2. Through the case report, the authors draw the conclusion that this technique should be considered as a new standard anesthetic regimen was slightly arbitrary and absolute.

COMMENTS TO AUTHORS

The case report should include relevant related literature but generally makes an interesting impression especially in minimally invasive techniques.
