New progresses in roles of nitric oxide during hepatic ischemia reperfusion injury

Ya-Qi Zhang, Ning Ding, Yong-Fen Zeng, Yuan-Yuan Xiang, Mei-Wen Yang,
Shu-Long Yang

Abstract

Hepatic ischemia reperfusion injury (HIRI) is a clinical problem that leads to cellular injury and organ dysfunction. The role of nitric oxide (NO) in HIRI is complicated and paradoxical. NO produced by endothelial nitric oxide synthase (eNOS) activation plays a protective role during early HIRI. But eNOS overexpression and the resulting excessive NO bioavailability can aggravate liver injury. NO induced by
