Horn of plenty: Value of the international registry for pediatric chronic myeloid leukemia

Suttorp M *et al.* International registry for pediatric CML

Meinolf Suttorp, Markus Metzler, Frédéric Millot

Abstract

Chronic myeloid leukemia (CML) in minors is a rare disease which can be effectively treated by tyrosine kinase inhibitors (TKIs) since the year 2000. A majority of pediatricians will encounter one or two CML patients in the course of their careers and will typically have to rely on written information along with their own intuition to provide care. Knowledge of response to TKIs and of age-specific side effects has an impact on the design of pediatric CML trials in many ways aiming to contribute

Design/Method: Patients in an IRB-approved, **international registry** who received **systemic sirolimus therapy** for at least 6 months were retrospectively reviewed for adverse events, goals and outcomes of **sirolimus therapy**. Results: 120 patients received sirolimus for at least six months. **Sirolimus therapy** was utilized for several different vascular anomalies, mostly with lymphatic malformations.
