SPECIFIC COMMENTS TO AUTHORS

This is a very well written review of current evidence for/against Vitamin C use. The review of multiple meta analyses provides a concise review of data so far. Future directions and adverse effects are well descibed

SPECIFIC COMMENTS TO AUTHORS

Thank you for the opportunity to review this manuscript. The manuscript has practical and meaningful sections on vitamin C and COVID infection discussing and commenting on current evidence on this subject. This is an elaborative and well-written manuscript that may be useful for clinicians. Table 1 should be modified, excluding unnecessary data and leaving only necessary data... for example, Reference Study Design Intervention summary Results in brief.

SPECIFIC COMMENTS TO AUTHORS

This is a very well-written and interesting paper. It is educational and the findings are important and relevant. I have several observations and questions. '.....which make it a lucrative therapeutic option for managing COVID-19 patients.' Could you write 'which could make it a possible low-risk, add on to the current therapeutic options for managing COVID-19 patients.'? This is an exceptionally well-done summary. I think all healthcare providers and trainees would benefit from reading it. Congratulations.
