-------------------------------------	---

SPECIFIC COMMENTS TO AUTHORS

Well compiled case report. The Authors should also give a comparison of parasitic leiomyomas in Open surgical cases Vs powered laproscopic technique, as the laproscopic technique offers other advantages also it should not be highlighted because of one rare complication. Also authors have clarified it sincerely, but can be presented better. Authors should also mention the tumor marker for this benign mass lesion to help screen or diagnose patients early.

SPECIFIC COMMENTS TO AUTHORS

Dear authors, The manuscript entitled " Parasitic leiomyoma in the trocar site after laparoscopic myomectomy: A case report" is a well described study. Only minor revisions i have to recommend. 1) Please check the whole manuscript for any grammar or expression errors 2) Please add the figure 1 in the main manuscript, rather than submitted as supplementary file. Well done
